

THUNDER

INTRODUCING THE THUNDER WEEKENDER

The Weekend...

Two words that offer an opportunity to relax or find adventure somewhere in the big open wilderness that our country offers.

Camping is fast becoming the primary hobby in Australia and one of today's major essentials when hitting the tracks or pitching a tent is power.

THUNDER

\$550 RRP

A multifaceted battery box that can be safely transported within your vehicle, then placed right beside the camp table, providing power to your lighting, portable fridge, smart phone, and laptop all at once.

The internal dimensions of the Thunder Weekender have been stretched (390 x 230 x 260mm) so that you can also fit the popular larger deep cycle batteries. Larger batteries mean more power!

All the Thunder Weekender accessories are positioned to the sides of the box, allowing for a well-balanced unit, with or without a battery.

The Thunder Weekender is supplied with a 240 Volt, 6 Amp, 7 stage battery charger that connects directly to the unit to charge your battery before heading out.

Suitable batteries are LEAD ACID, GEL, AGM and CALCIUM and will accommodate batteries rated from 60 - 160 Amp hour.

Your battery can also be charged via your DC-DC charger (not included) or solar panel and regulator (not included), through the 50 Amp Anderson plug.

12 Volt accessories can be connected to either the 2 x Accessory sockets or 2 x Merit Accessory sockets. Don't worry, each one of these ports are protected by a 15 Amp automatic reset circuit breaker.

A 5 Volt, 2.0 Amp USB port has the ability to charge smart phones and power-thirsty tablets.

The built in 300 Watt, 240 Volt inverter is pure sine wave. This means no output failure when connecting sophisticated electronic appliances such as laptops or power tools.

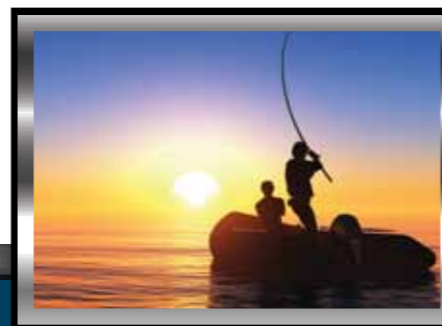

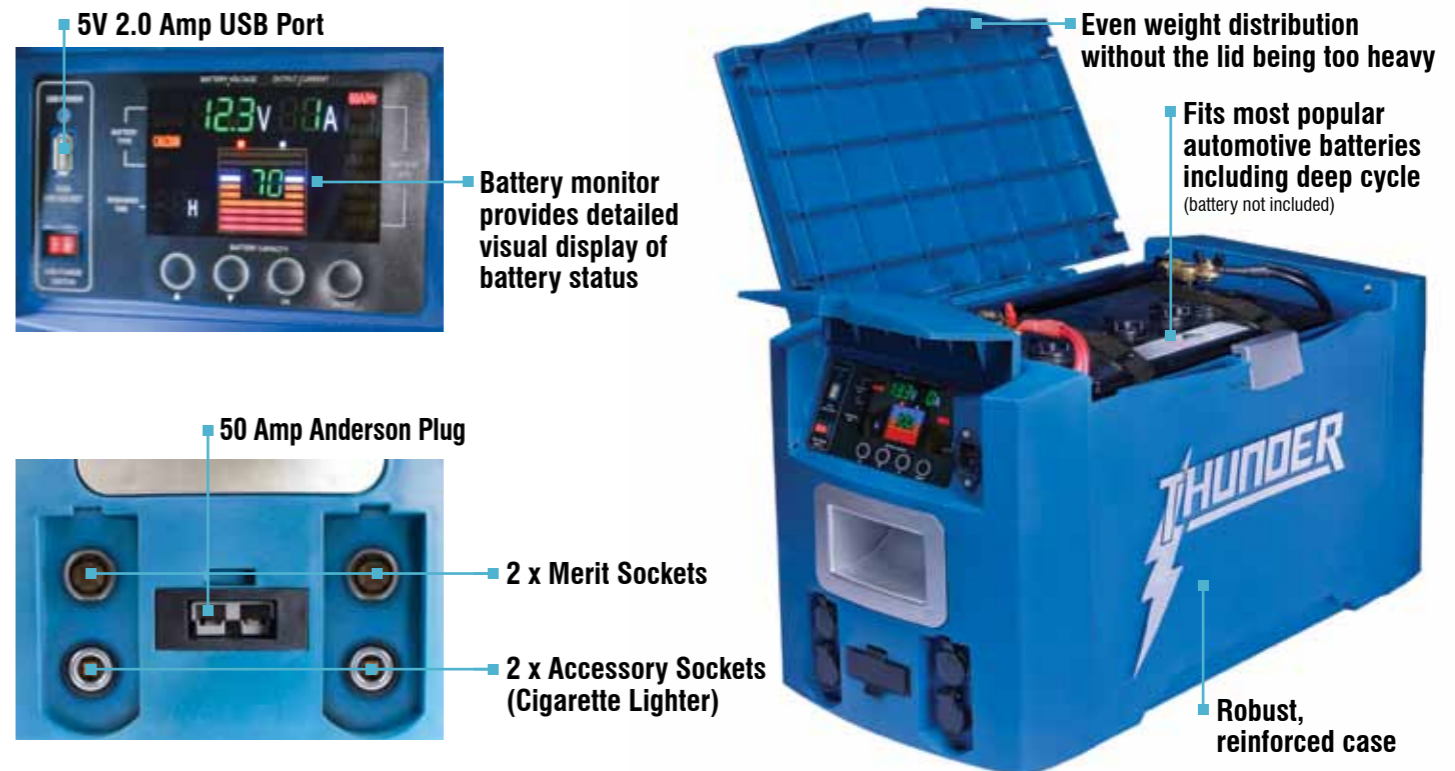

The Thunder Weekender is equipped with a full colour LED display that lets you know exactly what's going on in your battery, displaying;

- Battery type and Amp hour
- Battery Voltage
- Output current
- Remaining power percentage
- Remaining time (hours)

The Thunder Weekender is also equipped with a low voltage alarm alerting you when it's time to recharge.

An on/off master switch protects and isolates the Thunder Weekender's outputs when it's time for lights out, preventing battery power loss when the unit is not in use.
